

Urutan Jalanin Streamlit di Windows (MBG App)

0) Prasyarat

- Install **Python** 3.9 + dari python.org
- Saat install, centang **Add Python to PATH**

Cek:

```
python --version  
pip --version
```

1) Extract project

- 1 . Extract `mbg_streamlit_app.zip`
- 2 . Misal hasilnya jadi folder: `C:\Users\<nama>\Desktop\mbg_streamlit_app`

2) Buka terminal

Pilih salah satu: - **PowerShell** (recommended) - **Command Prompt (CMD)**

Masuk folder project:

```
cd C:\Users\<nama>\Desktop\mbg_streamlit_app
```

3) Buat virtual environment

```
python -m venv .venv
```

4) Aktifkan virtual environment

Jika pakai PowerShell

```
.\.venv\Scripts\Activate.ps1
```

Kalau muncul error execution policy, jalankan sekali:

```
Set-ExecutionPolicy -Scope CurrentUser RemoteSigned
```

Lalu ulangi aktivasi:

```
.\.venv\Scripts\Activate.ps1
```

Jika pakai CMD

```
.\.venv\Scripts\activate.bat
```

Kalau berhasil, prompt terminal ada `(.venv)`.

5) Install dependency

```
python -m pip install --upgrade pip setuptools wheel  
pip install -r requirements.txt
```

6) Jalankan Streamlit

```
streamlit run app.py
```

Browser akan terbuka ke: - `http://localhost:8501`

Kalau port bentrok:

```
streamlit run app.py --server.port 8502
```

7) Cara pakai app

1 . Upload `datasetmbg.csv`

- 2 . Pastikan **Separator dataset** = `|` (default sudah)
 - 3 . Pilih kolom teks (biasanya `text`)
 - 4 . Klik **Jalankan Labeling** → tunggu selesai
 - 5 . Klik **Download dataset_sentimen_berlabel.csv**
 - 6 . Klik **Train & Evaluate NB** untuk lihat Accuracy/Precision/Recall/F 1
-

Troubleshooting cepat

A) `streamlit` not found

- Pastikan venv aktif (`(.venv)`), lalu:

```
pip install -r requirements.txt
```

B) `cannot import name 'pipeline' from transformers`

```
pip uninstall -y transformers tokenizers huggingface-hub
pip install "transformers>=4.41.0" "tokenizers>=0.19.0" huggingface-hub
python -c "from transformers import pipeline; print('OK pipeline')"
```

C) Halaman blank/hitam

- Lihat error di terminal, biasanya import/dependency.
- Coba buka `http://127.0.0.1:8501`.
- Coba browser lain (Chrome/Firefox).
